

# Decoral ®

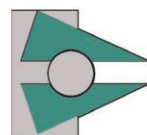

Decoral is a heat transfer sublimation process that has been in our Cork facility since 2005. It is a process where we apply a wood like or other surface finishes such as rusted or stainless steel effect to our aluminium profiles and sheet metal. We also apply bespoke finishes if the quantities are large enough.

The powder base coating is applied by our state-of-the-art chrome free paint lines. The grain and other effects are achieved by utilising specialised equipment from our Italian suppliers, Decoral®.

Combinations are endless. We currently hold up to 25 in house colours used to bring a different look to normal RAL colours or actual timber products.

\*image may not exactly match the finished product. Shade variations in production may occur due to the nature of the process. Most designs are UV stable, but some are not recommended for outdoor use—please consult AMS prior to order.

Architectural & Metal Systems

## Choose from a great selection of colours and finishes:

### Decoral:

- Bespoke finishes available for large quantities
- Aesthetically pleasing and robust
- The wood finish has an A2 fire rating
- Long design life in comparison to timber
- AMS is the only Decoral applicator in Ireland
- Some combinations tested in Florida sunshine
- Decoral finishes can be used both inside and out
- The textured Polyurethane powder used means it is hard-wearing & low maintenance
- AMS has the largest capacity for wood finish sublimation in the North of Europe
- Great options for windows, doors, furniture, fence and gate panels, cladding or signs
